Summary I am a passionate developer and student, and the founder of Apex Bytes — a small tech studio focused on web, software, game development, rendering and cybersecurity. I design and build responsive websites, custom software and interactive learning experiences, and I'm continuously expanding my skills in modern web stacks, backend frameworks, game development and security fundamentals. I enjoy turning ideas into polished, usable digital products.

Technical Skills (proficiency)

- HTML & CSS
- Django & Python
- Laravel & PHP
- JavaScript
- C++ & Arduino
- MySQL
- Cybersecurity Basics

Core Competencies

- Front-end development: responsive layouts, accessible UI, animations and interactions
- Back-end development: Django / Python and Laravel / PHP for web apps and APIs
- Game & simulation development: interactive educational experiences and gameplay logic
- Software architecture: planning, prototyping and delivering custom solutions
- Basic embedded & firmware work with C++ / Arduino
- Security mindset: secure-by-design approach and awareness of common vulnerabilities

Professional Experience Founder — Apex Bytes (Present)

- Founded and lead a small studio delivering web, software, game and cybersecurity work for clients and personal projects.
- Manage full lifecycle of projects: requirements, prototyping, development, testing, deployment and maintenance.
- Work across the stack: front-end interfaces, back-end services, simple databases, and interactive multimedia.
- Provide consultancy and hands-on development for clients needing websites, web apps, or learning simulations.

Selected Projects

1. SCLABE — Science experiment simulation game for students

- Role: Lead designer & developer
- Description: An interactive simulation tool/game to help students explore and learn science experiments in a safe, virtual environment.
- Highlights: Educational UX, simulation logic and interactive UI.
- Technologies: Front-end web stack + relevant game/simulation tooling (leveraging HTML/CSS/JS, Python or C++ skills as appropriate).

2. Job Connect

- Role: Platform architect & developer
- Description: A platform that connects job seekers with employers — listings, profiles and basic matching/communication features.
- Highlights: User accounts, job listings and search, employer/job-seeker workflows.
- Technologies: Web frameworks (Django / Laravel), front-end UI.

3. Legal Connect

- Role: Full-stack developer
- Description: A platform to connect clients with lawyers for consultations and legal services.
- Highlights: Profile management, search and contact workflows.
- Technologies: Web frameworks and typical web stack (HTML/CSS, backend framework).

4. PopCorn Movies & Homeland Music Vibes

- Role: Front-end developer & content integrator
- Description: Multimedia websites for showcasing movies/TV and Malawian music respectively.
- Highlights: Rich media presentation, responsive UI, user-friendly navigation.

5. EasyRide

- Role: Backend & integration developer
- Description: Bus ticketing system built with Laravel for booking and managing tickets.
- Highlights: Booking flows, seat management and transactional workflows.
- Technologies: Laravel / PHP, relational DB usage (MySQL).

Education

- Student — actively learning and expanding skills in software engineering, web development and cybersecurity (details available on request).

Availability & Work Preferences

- Open to freelance or contract work and small-to-medium client projects.
- Prefer projects that allow end-to-end contribution: idea → prototype → delivery.
- Willing to collaborate remotely and iterate rapidly.

Open to share

- Full portfolio, project demos, and source code (GitHub) on request.
- CV in PDF or a tailored one-page resume for specific job applications.

References

Available on request.
